

Idaho 44 Corridor Preservation Study

Why is ITD studying Idaho 44?

Idaho 44 is one of the few east-west roadways motorists use to travel between Ada and Canyon counties. Several factors are driving the need for improvements:

- Growth in the region and increased traffic on Idaho 44.
- Development within the corridor.
- Cost to purchase right-of-way.
- A need to manage the driveways and intersections (access points).
