

Idaho 44 Corridor Preservation Study

Study Background

Over the last several years, ITD has:

- Asked the public to identify corridor needs and concerns.
- Established a working group of regional, state and federal agencies and local jurisdictions.
- Completed initial environmental scan of the corridor. (*See Station 2: Environmental*)
- Projected traffic volumes on the corridor.
- Initiated fieldwork to identify environmental concerns (i.e., cultural, wetlands, etc.).

This environmental process is helping ITD to screen (evaluate) options/alternatives for the corridor.
